EDUCATION

Bachelor of Technology (B.Tech), Software Engineering (GPA 4.6/5.0) **October, 2021 – present**
Federal University of Technology Owerri (FUTO), Owerri, Imo

- **Awards**:Maths Section, 2021/2022 Joint University Preliminary Examination Board(JUPEB), FUTO, Best graduating student.
  Relevant Coursework: Cloud hosting, Database Management, Object Oriented Analysis and Design, Software Engineering Development Life Cycle, Artificial intelligence, Blockchain Technology, Mobile App development,

RELEVANT WORK EXPERIENCE

Frontend Development **October 2024– Ongoing**
Department of Software Engineering, FUTO

- Led a team through agile sprints for a wedding website development using Javascript, CSS and HTML, team leader for projects and presentation on database management using Ms Access.
- Developed a website for a tech conference using HTML and CSS for responsive design for the frontend.

Student Industrial Work Experience Scheme 200 **April, 2024 - May, 2024**
Center for Social Awareness, Advocacy and Ethics(CSAAE) Training and Supervision,University Computer Centre, Federal University of Technology, Owerri

- Created and styled websites using HTML and CSS for responsive design and added interactive elements with Javascript to improve user experience.

Student Industrial Work Experience Scheme 400 **May, 2025 - November,2025**
Omney Payments, Egobeke Parkland, Ihiagwa Owerri.

- Web and desktop development on financial services.
- Training on web development using React.Js and Tailwind CSS.

Backend Development & DEVOPS **February - March, 2026**
Department of Software Engineering, FUTO

- Built a patient management system using Devops, deployed on AWS and successfully monitored with Grafana and Prometheus.

RELEVANT PROJECTS

PODCHAIN PWA
Blockchain-Enabled proof of delivery system for logistics
August 2026

Haunted House Game
August 2026

Patient Management system Backend API
August 2026

Whatsapp clone Mobile app development
August 2026

Patient Management System. **March, 2026**

- Built a production-ready microservices application using Docker for containerization, AWS for hosting, comprising billing, analytics CRUD operations for patient data, API gateway and authorization services.
- Implemented CI/CD pipelines using github actions and Ansible, managed project tasks in jira and setup monitoring using Prometheus and Grafana; wrote Junit tests and configured PostgreSQL and H2 as databases.

Tasty Relish restaurant website **November, 2025**

- Developed responsive frontend pages using HTML,CSS javascript and Bootstrap to display menu items, pricing details, and enable customer selections, maintained version control with Git.

Willmore Construction Website(Frontend development). **November, 2025**

- **I** worked on the frontend development of a fictional construction website. The website has sections that show the previous jobs done by the company, allows for booking of consultation, contact the company and more.

30-Cycle Build-to-ShipIndustry Experience Hackathon. **April, 2026 - May, 2026.**

- I worked in a team as the frontend developer creating a website that improves user experience and conversion with influencers across different social media platforms. I used Next.JS, PostgreSQL, React.Js, etc.

Title: Wedding Website Development **October, 2024**

- In this project, I developed a website for a couple. I coordinated my team which consisted of software developers, product designers, testers, etc. The website served as an interactive platform for couples to invite their guests, show their pre-wedding photos, allowing guests to RSVP, view event details, share memories through a digital guestbook.
- I further explored the following technologies: **Frontend**: HTML, CSS , **Backend**: Python, Flask, and used Google sheets as the **database** for all information collected from the guests and interaction on the website.

Action: Frontend development, project management, requirement gathering and analysis, product testing, version control.

Title: 2nd Brain mobile application **September, 2024**

Worked as a product design intern under African Agility using Figma. Learned the basics of information architecture , quantitative and qualitative analysis of user information, UX design and competitive product analysis and implemented them in a mobile application that helps people to take notes, set reminders, track their tasks and help people suffering from dementia.

Action: User experience, design thinking, user interface design, information architecture, user journey.

Title: Jeti Jewelry Ecommerce Store **November, 2023**

In this project, I gathered the functional and non-functional requirements for the business website/ virtual platform where people can shop for jewelry of good quality for themselves. I also defined the required components for the software.

Action: Qualitative analysis, quantitative analysis, production of software requirement specifications document.

Title: Innova Product Landing Page **November -December, 2023**

Worked as a product design intern under CWW Tech Africa using Figma

Action: Theme and Branding, Visual Elements, Color Scheme, Typography.

PROFESSIONAL DEVELOPMENT

Unity Game development course.
August 2026

Imo state Ministry of Digital Economy and E-government - Skill up Cohort 2 **May 2023 - September. 2023**

- Issuing Institution: Office of the Digital Commissioner for Digital economy and E-government, Imo state.
- Course Focus:User Design, User Experience, User design thinking, Information Architecture
